## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1- 11, drawn to a stable alcohol-in-fluorocarbon micro-emulsion, classified in class 424, subclass 9.1.
  - II. Claims 12 – 20, drawn to a stable liquid hydrocarbon-in-fluorocarbon, classified in class 424, subclass 130.1.
  - III. Claims 21 - 33, drawn to nano-particles composition, classified in class 424, subclass 489.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, group I is drawn to an alcohol-in-fluorocarbon micro-emulsion, while group II is drawn to a hydrocarbon-in-fluorocarbon and requires specific temperature ranges for its preparation. Group III however is drawn to a nano-particle composition. The compounds of groups I and II are silent to the particle size of their respective compounds.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. This application contains claims directed to the following patentably distinct species of the claimed invention: in group I, claim 2: a) a drug molecule, b) a food, c) a magnet, d) a sensor

Art Unit: 1615

molecule; of these species, if a drug molecule is selected, in claim 7: a) plasmid DNA b) oligonucleotide, c) peptide, d) protein, e) antibody, f) small drug molecule, g) rare-earth molecule, claim 9: a) asialofetuin, b) mannan, c) mannose, d) folate, e) a saccharide, f) an antibody. In group II, claim 18: a) asialofetuin, b) mannan, c) mannose, d) folate, e) a saccharide, f) an antibody. In group III, claim 30: a) a drug molecule, b) a food, c) a magnet, d) a sensor molecule; and claim 33: a) an antibody, b) carbohydrate, c) peptide, d) protein.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 1615

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. Claim 16 is generic to a plurality of disclosed patentably distinct species comprising a drug particle. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Micah-Paul Young whose telephone number is 703-308-7005. The examiner can normally be reached on M-F 7:30am-4: 30pm.
